## PROFILE

Data and AI specialist who turns messy operational data and manual processes into systems people rely on every day. Nearly four years building ETL pipelines, dashboards, predictive models and, more recently, AI agents across Apple, a Brazilian data team and independent clients. At Apple's EMEIA Sales BPR & Systems team I built the automation and reporting behind multi-billion-dollar sales programmes. Today I co-run Cork AI Consulting, helping Irish businesses find where time and money leak, fix the process, then automate it with AI that is safe, measurable and handed over properly.

Known for pairing hands-on engineering (Python, SQL, Snowflake, BigQuery, Playwright, Claude Code) with clear communication to non-technical stakeholders, in five languages.

**AI Agents & Automation • Data Engineering & ETL • BI & Dashboarding • Predictive Analytics • Process Re-engineering • Stakeholder Management**

## EXPERIENCE

**Co-Founder & Data / AI Consultant · Cork AI Consulting** Sep 2026 – Present

*Cork, Ireland · AI, data and automation for small and mid-sized Irish businesses*

- Co-founded the consultancy and run engagements end to end (discovery, build, validation, handover), scoping each around a measurable outcome such as hours returned or cost avoided.
- Built the delivery engine for the AI Opportunity Assessment: an agent that turns a discovery-call transcript into a client-branded, ROI-backed report, with an honesty check that blocks unsupported claims. First assessment delivered to a client in August 2026.
- Built a guardrailed Instagram DM assistant on Meta's Messenger Platform to answer customer enquiries 24/7 within strict rules, so it never gives a made-up answer.
- Turned 28 standalone AI workflows into a shared, version-controlled skills library, and built a knowledge base that syncs Git and Notion automatically as one source of truth.
- Designed the company's products showcase, including a live demo of BlarneyKey, a free, private, offline AI dictation app for macOS.
- **Stack:** Claude Code, Codex CLI, Claude API, Python, SQL, JavaScript/Node, Playwright, Vercel, Notion.

**Data Analyst · Apple** Nov 2025 – Oct 2026

*Cork, Ireland (Hybrid) · EMEIA Sales Business Process Re-engineering & Systems*

- Built pipelines, automations and dashboards that Account Executives and senior leadership used to run and track multi-billion-dollar sales programmes across EMEIA.
- Co-built an automated Python, Playwright, Snowflake and Claude Code agent pipeline that approves or rejects customers against programme business rules, eliminating hours of daily manual review and sharply reducing false rejections.
- Developed Playwright browser-automation workflows replacing manual data collection, validation and reporting for the team.
- Built Tableau dashboards on live Snowflake data, giving Account Executives and programme leadership visibility of sales performance, KPIs and underperforming regions.
- Built predictive scripts and statistical models on programme sales data to support forecasting and targeted outreach to historical customers.
- **Stack:** Python (Pandas, Playwright, Selenium), Snowflake, SQL, Tableau, Claude Code, Excel.

**Freelance Data & Automation Engineer · Independent** Oct 2024 – Sep 2026

*Remote*

- Reduced manual effort by up to 80% for client teams with custom Python and RPA automation, turning hours of multi-system handling into unattended scheduled runs.
- Managed the full lifecycle for several concurrent clients, from consultation to deployed data and automation solutions, with documented handovers in Git/GitHub/GitLab.
- Ran exploratory analysis and statistical modelling to define KPIs, surface trends and forecast performance.

**Data Analyst · Porto** Nov 2022 – Oct 2024

*São Paulo, Brazil*

- Engineered and maintained scalable ETL pipelines moving terabytes of data from disparate sources into Google BigQuery, enforcing integrity and governance.
- Optimised warehouse performance with complex SQL and stored procedures, cutting query times on heavy analytical workloads.
- Delivered BI dashboards that guided strategic decisions, translating stakeholder requirements into technical solutions.
- Drove process improvement with AppSheet apps and n8n AI workflows, and automated extraction from legacy systems (RPA) and external sites (web scraping).

**IT Assistant · Marcelo Tostes Advogados** Dec 2021 – May 2022

*São Paulo, Brazil*

- First point of contact for IT in a busy legal office: hardware and software support, system maintenance and network configuration.

## EDUCATION

**Bachelor's Degree, Analysis & Development of Systems · FIAP** 2022 – 2024

*São Paulo, Brazil*

- Modules: Database Applications & Data Science, Relational Databases, DevOps & Cloud Computing, Software Design, Disruptive Architectures (IoB & AI).
- Final-year project "Ocean Drones": full-stack platform for autonomous underwater drones, with a real-time sensor-data pipeline and scikit-learn / TensorFlow models for biodiversity prediction and species classification.

## CERTIFICATIONS

**Python for Data Science · Alura** Oct 2023
**Google Looker Studio · Alura** Aug 2023
**Business Agility · Alura** Nov 2023

## TECHNICAL SKILLS

**AI & Agents:** Claude Code, Codex CLI, Claude API, OpenAI API, agentic workflows & tool use, MCP, RAG, LangChain, prompt & evaluation design, human-in-the-loop guardrails

**Machine Learning & Statistics:** scikit-learn, TensorFlow, regression & classification, time-series forecasting, RFM / customer segmentation, A/B testing, hypothesis testing

**Programming:** Python (Pandas, NumPy, Matplotlib, Playwright, Selenium, BeautifulSoup, Requests), SQL, DAX, JavaScript / Node.js, Bash, Google Apps Script, VBA

**Data Engineering:** ETL / ELT design, data modelling, data quality & governance, dbt, Airflow, REST APIs, web scraping

**Databases & Cloud:** Snowflake, Google BigQuery, PostgreSQL, MySQL, Supabase, GCP (Cloud Run, Cloud Functions, Dataflow), AWS (S3, Lambda, Redshift)

**Automation & RPA:** Playwright, Selenium, n8n, UiPath, Zapier, AppSheet, PyAutoGUI

**BI & Visualisation:** Tableau, Power BI, Looker Studio, advanced Excel (pivot tables, Power Query, macros)

**Engineering & Delivery:** Git / GitHub / GitLab, Docker, CI/CD (GitHub Actions), FastAPI, Flask, Vercel, Notion, Agile / Scrum
